Acetic Acid Content Of Vinegar: An Acid-Base Titration In fact, when a wine has "gone off" and has acquired a sour taste, this is due to the oxidation of the ethanol in the wine to acetic acid. (The "corking" of wine, i.e. tainting of the wine by compounds transferred from or through the cork, is due to a totally different chemical process.) Vinegar derived from red or white wine is the most common. The commercial vinegars that we will be using today all list the acetic acid content as approximately 5 %. The acetic acid content or acidity of vinegar can be calculated from the neutralization reaction of acetic acid using a base of known concentration. We will perform a titration.
