2024 Angles and Units in Astronomy - Physics and Astronomy A solar day is longer than a sidereal day by 3.9 minutes (24 hours vs. 23 hours 56 minutes 4.091 seconds) Solar time and sidereal time are different because the Earth rotates on its axis while it orbits the Sun. The Earth's rotation period relative to the Sun is 24 hours, but relative to the stars it is 23 hours 56 minutes 4.091 seconds. This is because the Earth moves along its orbit around the Sun, so it has to rotate a little more than once to bring the Sun back to the same position in the sky.
