Central Nervous System - Spinal Cord, Spinal Nerves ...* Tracts-bundles Of Myelinated Axons In CNS (brain And Spinal Cord) 2.

The Lateral White Column includes the White Matter on either side of the spinal cord between the anterior and posterior columns. It has both ascending (sensory information from spinal cord to brain) and descending tracts. Jan 13th, 2024.

Spinal Cord, Spinal Nerves And Somatic Reflexes • Ascending tracts carry signals up to brain. • Descending tracts carry signals down spinal cord. • Tracts can be contralateral (origin and destination are on opposite sides) or ipsilateral (origin and destination are on the same side). White matter in the spinal column and spinal cord injuries [Read-Only] • Descending carry information from the brain to the body • Ascending brings information to the brain • Major descending – corticospinal, reticulospinal, vestibulospinal • Lateral corticospinal (pyramidal tracts) largest and clinically most important. Withdrawal reflex: function is to remove a body limb or other part from a painful stimulus. • Reciprocal innervation: causes relaxation of extensor muscle when flexor muscle contracts. {Also involved in stretch reflex. • Crossed extensor reflex: when a withdrawal reflex is initiated in one lower limb, the crossed extensor reflex causes contraction of the extensor muscles of the opposite lower limb. Chapter 13 The Spinal Cord & Spinal Nerves – Effector 20 Stretch Reflex (Patellar Reflex) • It operates as a feedback mechanism to control muscle length by causing muscle contraction. – Prevents injury from over stretching because muscle contracts when it is stretched • Monosynaptic, ipsilateral reflex.
